

EXPERIENCE TRUE WIRELESS

CONTROL YOUR COMPUTERIZED TELESCOPE VIA WIFI

COMPETITORS

WHAT YOU NEED

1. WiFi Box and HC Cable
2. Cable Adapter
3. AC Adapter or (4) AA Batteries
4. Hand Control Remote
5. Velcro Straps

CONNECTING WiFi

A complex system of wires and interconnecting cables to achieve a WiFi connection. You need to power your WiFi box with the AC adapter or batteries. Plus, you need to stick gooey Velcro to your mount!

Hand Control Needed for Setup

USING THE TELESCOPE

Competitor WiFi adapters are cumbersome, more expensive and their apps aren't free. PLUS, you still need the hand controller and a mess of cables.

RESULT:

HAND CONTROL NEEDED FOR SETUP.
COMPLEX EXPERIENCE. EXPENSIVE APPS.

NOT TRULY WIRELESS!

WHAT YOU NEED

1. Celestron SkyPortal WiFi Module

Really . . . that's it!

CONNECTING WiFi

Our WiFi is built into the adapter. It simply plugs directly into the mount's AUX port and is **SELF POWERED!**

No Hand Control Needed!

USING THE TELESCOPE

Connect and align your telescope via phone or tablet with the **FREE Celestron SkyPortal app** for iOS and Android.

RESULT:

NO WIRES. EASY CONNECTION.
DIRECT ALIGNMENT. FREE APP!

TRULY WIRELESS!
